
1080p Namespace Dubbed Subtitles 2k Download

The screenshot shows the Visual Studio documentation page for the `ShellExecute` class. The page title is "ShellExecute" and it is part of the ".NET Framework Class Library". The class is located in the "(Default Namespace)" namespace and the "Microsoft Dynamics AX (in Ax32.exe)" assembly. The page includes a description of the class, its syntax, and its members.

ShellExecute Class

[This topic is pre-release documentation and is subject to change in future releases.]

Used to launch a file, such as an Excel workbook, from a menu by finding the file. The Windows registration editor can be used to associate types of files with Windows Notepad (notepad.exe). Specifying any file with the .txt extension to the file.

Namespace: (Default Namespace)
Assembly: Microsoft Dynamics AX (in Ax32.exe)

Syntax

```
X++
class ShellExecute : Object
```

Members

| Member | Description |
|-----------------------------|--------------------------------------------|
| <code>main(Args)</code> | The entry point of the ShellExecute class. |
| <code>parseArgs(str)</code> | Processes the command line arguments. |

Remarks

According to "Reporting and Business Intelligence in Microsoft Dynamics AX" WinAPI::shellExecute() method calls in menu item action implementations, to
